PROJECTS

FUNDPAK (Pakistan's First Crowd Funding App) FYP

Android, IOS & WEB App

• Developed an application using flutter and firebase for entrepreneurs and small businesspersons.

• This project is initialized to help people to engulf the bridge b/w entrepreneurs and the investors of Pakistan.

• Followed agile development life cycle and perform all testing of a CrowdFunding Application that helps users to get their work done with secure Payment

Supervisor: Dr Hassan Dawood

ECG based identification system using wavelet transform

". Data of 48 subjects of Cardiac arrhythmia from an Israel hospital was taken. The project was divided into 4 major parts. Firstly, data were normalized because the sample data contain some noise it was processed and cleaned to protect the data from information

loss. It was given a DC shift to get it normalized: Secondly, the preprocessed data was then segmented to extract features from the given dataset. Features were extracted based on the R-Peak amplitude based on wavelet transform (Dabashi). The dot mat data into a CSV file. Then the training and classification were done.

Automatic Car Number Plate Detection System

This was also Digital Image Processing Project. In this project, I tried to extract the details of the number plate easily even if the picture quality is bad. The final results were very pleasing I was successful in converting the blurry image in motion easily detectable by using specific functions of DIP.

Attendance Management System

Application to let Users manage monthly or yearly attendance of Students, teachers, and other working people.

• It can systematically manage their attendance, presents, and absents

• Sign in as Guest User or Sign in with Google Account to manage data online

Chat board System

An application made using operating system techniques where two users can chat with one another like the messenger.
